

# 20

**D.R.K.** You are given the number  $N_0 = 7518$ . Sort its digits ascending first, then descending to get two numbers. Find the difference between these numbers (a smaller number should be subtracted from the larger one). This difference gives you  $N_1$ . If you repeat this procedure 23000000000 times, then you will get  $N_{23000000000}$ . Also, take the number  $K_0 = 3289$  and find  $K_{45000000045}$  in the same way. What is the difference between  $N_{23000000000}$  and  $K_{45000000045}$ ?

**Answer format** Give an integer value as the answer.
